CITY EDGE
DEVELOPMENTS

City Edge Developments is Egypt's national leading real estate developer and development manager. The company is established between New Urban Communities Authority (NUCA), Ministry of Housing, and Housing Development Bank. City Edge Developments develops and manages the establishment of high-end real estate projects.

Additionally, it has a diversified land bank for third-party accounts, containing indirect real estate holdings under the firm's management that span a range of investments across all asset classes, including residential, hospitality, retail, office, and education.

WHY CONSIDER EGYPT: A PROSPERING DESTINATION

Real estate is often labeled a “safe haven,” offering investors profitable benefits even during slow market conditions. Property is usually a hedge against inflation, as it appreciates in value over time and can potentially provide its investors, with additional income through leasing. Relative to other investments, real estate is easier to get into.

In Egypt, the property market remains one of the highest growing industries due to the country’s ongoing population boom. Demands for both residential and commercial communities continue to rise every year.

Accordingly, the Egyptian housing industry is among the most promising markets, as the country’s population is coming closer to 100 mn, which is why the government is working toward expanding the habitable land area and establishing new urban communities around Egypt, aiming to accommodate the population growth and encourage people to move back to their hometowns outside of the overpopulated Cairo.

Following the EGP flotation, Egypt has witnessed a dramatic shift and increase in the real estate market; seeing a significant demand for real estate. As a result, the country has begun to introduce new cities with impressive real estate projects, such as the New Administrative Capital (NAC), New Alamein, New Mansoura, to name a few.

In essence, the government has designated the building of several new cities as the basis of both an urbanization strategy and a plan to decentralize development. Both public and private developers are now looking to attract more foreign investments into the Egyptian real estate sector. As a result, Invest-Gate aims to demonstrate these investment opportunities through a comprehensive guide to invest in Egypt’s new cities, which are set boost more local and foreign investments in both the real estate and construction sectors.

01.

EASE OF DOING BUSINESS & ECONOMIC OUTLOOK OF EGYPT

» GDP GROWTH, HIGH POPULATION
BOOM & DEVELOPMENT POTENTIAL

» ECONOMIC REFORMS & LEGISLATIVE
AMENDMENTS BRING EGYPT BACK ON
WORLD'S INVESTMENT MAP

The Ease of Doing Business index ranks countries against each other based on how the regulatory environment is encouraging the commencement and operation of any business. Economies with a high rank have simpler and better regulations for establishing businesses.

 **Egypt's Ranking in Ease of Doing Business Index (Out of 190)**

Ease of Doing Business

Starting a Business

Paying Taxes

Protecting Minority Investors

Resolving Insolvency

Getting Credit

Enforcing Contracts

The good news is that Egypt is among the most improved economies in the World Bank's (WB)'s latest Ease of Doing Business report; the country jumped eight spots to rank 120 out of 190 countries, making it to the index's top performers, thanks to the implementation of regulatory reforms that facilitated doing business in several fields compared to last year.

Egypt achieved progress in five areas: starting a business, access to credit, protection of small investors, tax payments, and settlement of insolvency cases.

STARTING A BUSINESS:

The process of starting a new business became much easier over the past year with the introduction of the “one-stop shop” concept, which doesn’t require a bank certificate and helps reduce regulatory complexity. It now takes an average of 11 days and 6.5 steps to start a business.

MAKING IT EASIER TO ACCESS CREDIT:

Egypt worked on strengthening the legal rights of borrowers and lenders alike by introducing the possibility of granting a non-possessor security right in a single category of movable assets without requiring a specific description of the collateral. Secured creditors are now given absolute priority over other claims, such as labor and tax, both outside and within bankruptcy proceedings.

The country also stepped up protections for **Minority Investors** by expanding shareholders’ role in company management and increasing corporate transparency.

RESTRUCTURE WITH BANKRUPTCY PROTECTION:

Under the subhead “resolving bankruptcy,” Egypt introduced a new restructuring procedure, which included training programs on solvency law, allowed debtors to initiate the reorganization procedure, and granted creditors greater participation in the proceedings.

Paying taxes was also made easier by extending value-added tax (VAT) cash refunds to manufacturers in case of capital investment.

“The remarkable acceleration in the pace of reform of business in Egypt is a sign of optimism for the country’s commitment to entrepreneurship and empowering private-sector institutions,” Samia Msadek, former WB country director for Egypt, Yemen, and Djibouti, said in a press release in 2018.

“We look forward to continued efforts in order to adopt fair, transparent, and efficient regulatory practices to stimulate private-sector-led job-creation efforts,” Msadek added.

GDP GROWTH & HIGH POPULATION BOOM

Despite all recent market changes, the demand for housing in Egypt remains huge, and it is mainly fueled by the fast-growing population that hit more than 98.6 mn by the end of May 2019, according to the Central Agency for Public Mobilization and Statistics (CAPMAS). Additionally, there are around 900k marriages happening every year and those newly-wed couples are looking to move into their own new homes and invest in property for the future. This is considered a major contributor to the increased demand

at all income levels. Also, upward mobile families are always looking to either upgrade from small apartments to bigger ones or from big apartments to villas. Not counting new business owners and entrepreneurs, who are constantly seeking prestigious offices for their businesses.

On another note, Egypt's growth rate for FY 2017/18 hit its highest level in ten years as it recorded 5.3%, compared to 4.1% in the year before. The WB expected the country's growth rate to reach 5.6% in FY 2019.

Mid-Year Population Estimates (2002-2018)

ECONOMIC & LEGISLATIVE REFORMS BRING EGYPT BACK ON WORLD'S INVESTMENT MAP

In June 2017, Egypt ratified the landmark investment law that will reduce barriers to how international companies invest and operate in the country. This measure will expand economic growth, domestic production, exports, and foreign investment. It is designed to boost employment opportunities and increase Egypt's competitive edge across the region.

The law is also expected to ensure equality of opportunity, empower youth, protect the environment and public health and improve governance and transparency.

Minister of Investment and International Cooperation Sahar Nasr affirmed that amendments to some provisions of Investment Law No. 72 of 2017 will contribute to encouraging companies to expand their investments by granting incentives that the old law was earlier restricting to establish new projects.

Successful implementation of these reforms have given a greater confidence to foreign investors, leading to increased net foreign direct investments (FDIs), which stood at USD 7.9 bn and USD 7.7 bn in FY 2016/17 and FY 2017/18, respectively.

GDP (Annual Growth Rate %)

Growth domestic product grew 5.3% in FY 2017/18, compared to 4.1% in FY 2016/17, marking the highest growth rate since FY 2011/12

Net Foreign Direct Investments (USD bn)

Net foreign direct investments reached USD 7.7 bn in FY 2017/18

PRINCIPLES GOVERNING INVESTMENT IN EGYPT

The new investment law identifies eight principles that should govern investment and be applicable to both the state and investors. These principles include (Articles 3–8):

1.

Equality of investment opportunities and non-discrimination

3.

Consideration of the social dimension, public health, and environment protection

5.

Compliance with principles of governance, transparency, prudent management, and non-conflict of interests

7.

Maintaining stability of investment policies

2.

Expedition and facilitation of investors' transactions

4.

Freedom of competition, prevention of monopoly, and consumer protection

6.

Supporting emerging companies, startups, and micro, small- and medium-sized enterprises (SMEs)

8.

Preserving national security and public interest

Guarantees and safeguards: The new law maintains fundamental safeguards provided for investors, including general standards of treatment, entry and lodging of foreign investors, protection against nationalization, unlawful expropriation or confiscation, warning before revocation or suspension of licenses, transfer of funds, right to appoint foreign labor force, and enforcement of state contracts.

Investment incentives: In addition, the law provides a bundle of general, special, and additional financial and procedural incentives for investment. The special

incentives, for example, support development-oriented enterprises on a geographic and sectoral basis. Investors may deduct from their taxable net profits 50% of investment costs in Sector A and 30% of investment costs in Sector B. Sector A includes the geographic locations that most urgently need development, while Sector B covers all other areas in Egypt. It targets enterprises operating in sectors directly related to Egypt's development plan, including labor-intensive sectors and export-oriented sectors, SMEs, renewable energy, and mega projects.

Corporate social responsibility (CSR): The bill provides tax incentives for investors who dedicate a percentage of their annual profits to the creation of social development systems outside of their projects in areas such as environmental protection, healthcare, social care, cultural care, technical education, and research and development.

To fight corruption, the new bill denies protection, safeguards, privileges, and exemptions to enterprises established on the basis of deceit, fraud, or corruption.

Dispute settlement: The law provides multi-tiered mechanisms for the settlement of investment disputes, including domestic litigation, amicable settlement, alternative dispute resolution, and administrative review by specialized committees.

In addition, subject to the agreement between the state and the investor, it allows settlement through domestic or international ad hoc or institutional arbitration. Finally, it establishes an independent center—the Egyptian Arbitration and Mediation Center—for settlement of disputes between investors or with governmental entities.

The bill also promotes domestic and foreign investments that contribute to sustainable development and abide by responsible business conduct standards. It also provides incentives and investment facilitation measures in a framework of balance between rights and obligations of investors and state alike. Besides, it increased the number of new established companies from 15,200 in FY 2016/17 to 19,836 in FY 2017/18.

No. of Companies

The graph shows an increase of 30.5% in the number of companies during FY 2017/18, compared to the corresponding period of the previous year

02.

EGYPT'S NEW CITIES

- » NEW GENERATION CITIES AS ATTRACTIVE INVESTMENT OPPORTUNITIES
- » INVESTMENT MAP IN EGYPT'S NEW CITIES

It has become necessary to establish new cities for different reasons such as decreasing pressure on major cities and their infrastructure, as well as, creating new investment and job opportunities.

According to CAPMAS, the Egyptian population has surpassed 98 mn, of which 92.7 mn are residing in Egypt and about 8 mn are living abroad.

 **Population Growth (mn)**

In the face of an over growing population, and with the goals of further reducing unemployment levels and raising living standards, among other key strategic goals that become part of Egypt's 2030 Agenda, the North African country has built new cities, many of which are eco-friendly and run mostly, if not completely, on new and renewable energy.

The Ministry of Housing has recently launched an ambitious plan to build new modern cities in Upper Egypt, in cooperation with the New Urban Communities Authority (NUCA), with total investments of EGP 13 bn in FY 2017/18.

 **NUCA's Investments in New Cities (EGP bn)**

NEW GENERATION CITIES AS ATTRACTIVE INVESTMENT OPPORTUNITIES

The launch of mega projects in new areas would necessarily open up new investment and job opportunities, while fueling the demand for housing, and thus, increasing real estate projects.

These new cities are located in the provinces of Cairo, Giza, Qalyubia, Marsa Matrouh, Alamein, Dakahlia, Beheira, Port Said, North Sinai, Beni Suef, Minya, Assiut, Qena, Luxor, and Aswan, while the largest new one is the NAC, located east Cairo.

TOURISM & REAL ESTATE

» EGYPT'S TOURISM COMEBACK

» TOURISM CONTRIBUTION TO GDP

Currently, there are two powerhouse industries in Egypt performing at opposite ends of the spectrum, tourism and real estate. Their integration has become an economic complex, covering all aspects of real estate, vacation, leisure, and entertainment.

The real estate industry is an integral part and an underlying infrastructural basis of Egypt's tourism sector, just as many other industries in any economy. Tourism activities are most often tied to geographical settings and much of the physical space where the activities occur, have been developed, and may be also managed, by real estate firms. This comes with the development of a transnational business base, market overlap, and vertical and/or horizontal integration for reasons of business efficiency or strategy. The distinctions between tourism and real estate are becoming increasingly blurry in terms of pattern use. Hotels serve as long-term residences and offices for an itinerant business workforce and leisure communities offer both residential and recreational services to an often-international population.

EGYPT'S TOURISM COMEBACK

Egypt has been announced as one of the fastest growing tourist destinations in the Middle East, in terms of year-over-year percentage increase of visitors, according to the United Nations World Tourism Organization (UNWTO)'s 2018 report on global travel and tourism.

The annual report showed that Egypt welcomed about 8.2 mn tourists during 2017, with an increase in the number of tourists by 55.1%, compared to the same period of the previous year. Luxor and Giza were the top of Egypt's most famous and well-known cities for tourists' choice, according to the report.

↑ World's Top 10 Fastest Growing Tourism Destinations in 2017

In 2018, tourism revenues increased by 50% to USD 11.4 mn, while 11.34 mn tourists spent nearly 121 mn nights in Egypt. European tourists comprised the majority

of arrivals in 2018, with 7 mn followed by Arabs and Asians, while German visitors accounted for 1.7 mn, and Britain came in the third place with 421k tourist arrivals.

Tourism Revenues (bn)

Tourist Nights (mn)

| 2013 | 2014 |
|-------------|--------------|
| 94.4 | 97.25 |

| 2015 | 2016 | 2017 |
|--------------|--------------|--------------|
| 84.12 | 32.71 | 83.78 |

Tourist Arrivals (mn)

| 2013 | 2014 | 2015 |
|-------------|-------------|-------------|
| 9.46 | 9.87 | 9.32 |

| 2016 | 2017 | 2018 |
|-------------|-------------|--------------|
| 5.39 | 8.29 | 11.34 |

Tourist arrivals to Egypt grew by 40% in 2018, reaching around 11.34 mn tourists, up from 8.29 mn in 2017.

This significant rebound in Egypt's tourism is owed to the government, which has done a lot in terms of security and investment in infrastructure and is working hand-in-hand with the private sector to attract more investments, renovate existing hotels, and establish new ones.

The biggest challenge to the tourism sector in 2019 will be the launch of creative promotional campaigns in tourism source markets, in order for Egypt to stand on an equal footing among its competitors.

TOURISM CONTRIBUTION TO GDP

Tourism's growth rate reached 72.9% and 3.2% in 2017 and 2018, respectively. The recorded strong growth in 2017 is attributed to the current stable socio-economic climate in the country.

While growth was witnessed across various tourism destinations in Egypt, the most notable growth was recorded in Cairo's corporate segment as well as leisure

demand channeled toward remote Red Sea resorts such as Sharm El Sheikh, Hurghada, and Luxor.

This growth is expected to continue on the back of government's investments in the tourism sector such as the Grand Egyptian Museum, near the Pyramids of Giza, and the opening of a number of international airports in the country such as Sphinx International Airport.

Direct Contribution of Travel & Tourism to GDP

Direct contribution of travel & tourism to GDP reached its maximum level of 72.9% in 2017

INVESTMENTS IN TOURISM SECTOR

Investments in the tourism sector have witnessed a recovery after the 2011 revolution. Investments reached EGP 6.6 bn in FY 2012/13, and stood at EGP 4.7 bn and EGP 4.3 bn from 2013 to 2018.

Investments in Tourism Sector (EGP bn)

REAL ESTATE & TOURISM AS ECONOMY BACKBONE

Tourism real estate emerged as a concept that is characterized by the development of large-scale tourism resources, along with residential or vacation properties.

In recent years, a new touristic, leisure, and real estate mixture has turned heads across both the private and public sectors. Currently, both the government and private developers aim to integrate tourism and leisure resources such as resorts, hotels, airports, sports, and entertainment facilities, when developing a city or residential project to transform it to a fully integrated one.

Some of the most popular real estate developments in Egypt's resort destinations are El Gouna, Soma Bay, and

Sahl Hasheesh, which are anchored by the tourism resources of hotels, resorts, and entertainment offerings.

NAC is set to include residential districts alongside artificial lakes, a major theme park, an electric railway linking with Cairo, and a new international airport, among other facilities.

Another example is Galala City, which is located between Ain Sokhna and Zaafarana on the Red Sea coast. It is set to be a unique project that integrates all tourism elements, including a resort, hotels, villas, chalets, water parks, and leisure and commercial activities. The project's plan includes a tourist resort across 1k acres to overlook the Gulf of Suez.

Meanwhile, New Alamein city, on Egypt's North Coast, will also feature 16 hotels, sports clubs, a cinema complex, theaters, a scientific research center, a yacht harbor, a business center, residential projects, and a number of resorts.

Moving to Nile Delta on the Mediterranean Sea, foundation for an integrated New Mansoura. The new city spans across 5,913 acres with a 15-kilometer beach front, comprising luxurious tourist housing areas, in addition to middle-class residential areas as well as hotels to serve medical tourism visitors.

Egypt's new cities are developed for urban and tourism purposes, more particularly for both purposes integrated.

04.

**STEPS, CONDITIONS
& CONSIDERATIONS
WHEN INVESTING
IN EGYPT'S REAL
ESTATE**

PROPERTY FOR RESIDENCY LAW UPDATE

- ◆ Ownership is limited to only two real estate properties in Egypt; one serves as an accommodation for the owner and his/her family (spouse or minor), in addition to the right to own another property needed for activities licensed by the Egyptian government.
- ◆ The area of each real estate property shall not exceed 4k sqm.
- ◆ The property is not listed as a historical site.
- ◆ Ownership in tourist areas and new communities is subject to conditions established by the cabinet. Exemption from first and second conditions is subject to approval of the prime minister.
- ◆ Foreigners may only sell their real estate property five years after registration of their ownership, unless the consent of the prime minister for an exemption is obtained.

For investors to own a housing unit and invest in Egyptian real estate, restrictions and laws are applied. A temporary citizenship, for non-touristic reasons, will only be given to investors for a limited time ranging between one, three, and five years. The residency duration will be set by the Passports, Immigration, and Nationality Administration, based upon the amount of the investment. This situation only applies if the properties are under construction. Furthermore, the residency will only be given to investors when the full amount is paid in USD: 40% in advance or USD 100k.

To complete the residency process, various requirements are to be met. The owner or investor should present a preliminary contract with the owner, stamped by the owning entity of the land plot. The land owning entity should then send a letter approving the process. The bank must also present a letter proving the transfer of the full value of money from abroad. All letters should assure that the units are still under construction and shall

determine the completion date, which is within a four-year time frame.

And as a step toward enhancing investment in Egypt, a new investment law was officially issued on May 31, 2017. The new law came in offering further incentives, reducing bureaucracy, while simplifying and enhancing processes for foreign investors to invest in real estate.

In other words, the new law encourages investments through creating new incentives, reduces government restrictions, protects investors' money from arbitrary decisions, and eases cross border trade. The law also provides immunity to the system because it does not allow the public administrative authorities to revoke licenses issued for investment projects. At the same time, the law should not affect the benefit and tax exemptions, as well as, other guarantees and incentives for existing companies. Establishments shall also retain their privileges, exemptions, guarantees, and incentives until the end of related investment period.

NOW IT'S TIME TO INVEST IN NEW CITIES

Egypt's real estate industry has proven to be a stable and resilient bet in the past few years, despite the constant fluctuation seen in the country's overall economy since the 2011 revolution. The total property market value remained on the rise since then, backed by the domestic investors, who chose to pump their cash into the sector, considering it a safe haven amid violent swings witnessed in other sectors.

Based on Invest-Gate's analysis, some new cities have managed to stand out among their rivals. NAC tops the list as a golden investment opportunity. It is deemed Egypt's most attractive spot, luring the highest number of projects and developers. However, there is still considerable room for more investors to head to NAC, especially in the industrial and tourism sectors.

New Alamein comes second, with four real estate developers operating in the residential sector so far, while three mega tourism and one educational projects are being currently implemented. The coastal city is a distinct location to invest in, especially when it comes to commercial, industrial, and cultural businesses.

Meanwhile, cities like New Assiut, New Aswan, New Damietta, East Port Said, New Fayoum, Galala City, New Mansoura, New Minya, and New Sphinx are seeing investments in the residential sector more than any other sector, which paves the way for further diversified investments on their lands.

Despite the promising future of investments, New Akhmim, New Beni Suef, New Borg El Arab, New Luxor, New Nubaria, New Qena, New Rashid, New Salhia, New New Sohag, and New Tiba haven't seen any interest from the private sector yet.

Great efforts exerted by both public and private sectors in Egypt's new cities open up abundant investment opportunities on local and international levels. The new cities have shown great potential for new investments, given their distinguished locations, highly-equipped infrastructure, alongside a wide range of services and facilities these cities have to offer.
